STATISTICAL SUMMARY

Agricultural Marketing Service, U.S.D.A.

Washington, D. C.

SS-187

June 23, 1958

Wheat to Top 1957 Crop by a Third

An all-wheat crop of 1,271 million bushels was forecast by the Crop Reporting Board as of June 1. Such record crop would exceed last year's production by 34 percent.

Winter wheat crop is now estimated at a record high of 1,069 million bushels, 51 percent more than last year and 26 percent above average. Indicated yield of winter wheat at 25.4 bushels per acre compares with 22.4 last year and 18.9 average.

All spring wheat, at 202 million bushels, is 16 percent below last year and 24 percent below average. Deficient moisture in important areas during May reduced spring wheat prospects.

Durum, a small crop this year, is expected to total only 16.1 million bushels, compared with 40 million last year and the 10-year average of 30 million. The small crop of durum wheat is due largely to reduced plantings, only about half that of 1957.

Over-all Crop Prospects Favorable

Crop prospects are favorable over most of the Nation, after a month which aided spring planting and crop progress. Cotton stands are virtually secured after slow starts in much of the South. Corn and soybean planting mainly have been completed. Forage crops and pastures generally are producing well despite some sectional setbacks. Fruits are sizing well and mounting vegetable supplies signal the end of the early spring slowdown. Western irrigation water supplies are excellent.

Good Prospects for Rye

Rye condition June 1 was reported at 89 percent of normal. This was a 3-point decline from a month earlier. Dry weather caused reductions in some northern areas but the condition was still favorable for the country as a whole, being 2 points above a year earlier and 8 points above the 10-year average.

Hay Close to Last Year's Record

Compared with a month ago, hay condition declined in most North Atlantic and North Central States but improved in most South Atlantic and South Central States with only minor changes elsewhere. Prospects indicate a crop nearly as large as last year's record. Condition of all hay June 1 averaged 86 percent of normal compared with 88 a year earlier and 84 for the 10-year average.

Pasture and Range Conditions Excellent

The June 1 pasture condition of 88 matches last year and three other years of highest June prospects since 1944. Range livestock condition, uniformly good, averages best for the date since

1942. Need for rain was indicated, however, to maintain good range feeding later on.

Fewer Late Spring Potatoes

Late spring potato crop, at 27,145,000 hundred-weight, is 10 percent below last year but 2 percent above average. Forecast is down 7 percent from a month ago; favorable prospects in Alabama's Baldwin area, and for a limited acreage in Oklahoma, were more than offset by a sharp reduction in California. The estimated 16,790,000 cwt. in that leading late spring State is down 12 percent from the May forecast and 18 percent below the 20,435,000 cwt. produced there in 1957.

Early Summer Potatoes, Larger Crop

Early summer potatoes, forecast at 9,574,000 cwt., is 6 percent above the 1957 crop but 3 percent below the 10-year average. Virginia's Eastern Shore, a leading production area, will harvest about 1,980,000 cwt., 8 percent less than the 2,153,000 cwt. produced in 1957.

² Does not include incentive payment to bring season average return to 62 cents per pound.

Largest Peach Crop in 11 Years

U. S. Peach crop is forecast at 74.5 million bushels, topping last year by 19 percent and 18 percent above average. Would be largest crop in 11 years. But unusual weather or action by growers to harvest only choice fruit or to eliminate part of the crop can affect the outcome.

Excluding the California Clingstone crop, which is mostly for canning, rest of the U.S. crop is estimated at 49.5 million bushels, 24 percent larger than last year and 21 percent above

average.

Production in the 9 Southern States, at 15.2 million bushels, is 42 percent above last year, 51 percent above average, and the largest crop since 1947.

Prospects for Pears and Grapes

The 1958 pear crop forecast at 28,338,000 bushels, is 11 percent below 1957 and 5 percent below the 10-year average. Smaller crop is due

¹ Bureau of the Census.

to lower prospects in the Pacific Coast States which usually produces seven-eighths of the Nation's pears.

California grape prospects are somewhat below both last year and average while New York grape prospects appear promising.

Better than Average Apple Crop

An above-average apple crop is in prospect for the country as a whole. June 1 outlook by regions is as follows: Eastern States, well above last year and average; Central States, somewhat above last year and average; Western States, production somewhat below last year's heavy crop but still above average.

Smaller Sweet Cherry Crop

Sweet cherry production, at 83,580 tons, is 10 percent less than last year and 9 percent below average. Sour cherries (6 Western States) at 12,570 tons, will be about the same as last year and 21 percent above average.

Smaller Crops of Plums, Prunes and Apricots

California plums, at 57,000 tons, will be down from last year's production by almost 30 percent. Smaller crop is due largely to the rainy period during blooming. Prunes in California, at 127,000 tons (dry basis) will be 23 percent below both last year and average.

Apricots, forecast at 118,100 tons, will be down from last year by 38 percent, and 44 percent below average--shortest crop of record except for 1943, when 104,400 tons were pro-

duced.

Fewer Oranges, Grapefruit, and Lemons

Oranges and tangerines remaining for harvest on June 1 totaled about 10.4 million boxes. This compares with 31.2 million boxes remaining on the same date last year. Still to be harvested are 9.6 million boxes of California Valencias which are mostly harvested in the summer and early fall. Harvest of the remaining 0.8 million boxes, all in Florida, was rapidly drawing to a close on June 1.

Total orange and tangerine production (1957-58 season) is about 112 million boxes, 18 percent less than last season's crop and 8 percent below

average.

Grapefruit crop, now expected to total 40.2 million boxes, is 10 percent below last year and 14 percent below average. Only about 1.9 million boxes remained for harvest on June 1 compared with 4.9 million same date last year.

California lemons, at 15.6 million boxes, are 4 percent less than last year but 20 percent above average. About 6.0 million boxes remained for harvest on June 1 compared with 8.8 million the same date last year.

Last Year's Sugar Crops (Revised)

Production of sugar beets in 1957 totaled 15,497,000 tons, an all-time high. This was 19 percent above 1956 and 10 percent above the previous high of 14,082,000 tons produced in 1954. Sugarcane harvested for sugar amounted to 6,334,000 tons compared with 6,014,000 tons in 1956. The final production in 1957 was down about 12 percent from the December 1957 estimate as a result of late freezes in Louisiana and Florida.

Smaller Milk Output, But Still Above Average

The estimated 12,889 million pounds of milk produced in May was 1 percent less than for the corresponding month last year but topped the May 10-year average by 4 percent. May milk production was enough to provide 2.40 pounds of milk daily to each person in the U. S., 2 percent less than in May last year and 7 percent below the May average.

Smaller Egg Production, Fewer Layers

The 5,543 million eggs laid in May were l percent less than in the same month last year. Total laid January through May, 26,498 million eggs, was down from a year earlier by 3 percent.

Production per layer during May was 19.3 eggs, highest of record. The rate per layer was

above a year earlier in all regions except the North Atlantic and the South Central. Increases were 2 percent above last year in the South Atlantic and 1 percent in the North Central region and the West.

Laying flocks averaged 286,601,000 layers during May, 2 percent less than in Maylast year. Number of layers on June 1 this year totaled 283,202,000 compared with 287,284,000 a year earlier--a decrease of 1 percent.

Farm-Retail Price Spreads

Farm-Retail Spread and Farmer's Share of the Consumer's Dollar for Market Basket of Farm-food Products

Year and month	Retail cost 1	Farm value ²	Farm-retail spread	Farmer's share
1957 average	\$1,007	\$400	\$ 607	40%
1957 April	992	395	597	40%
1958 March	1,076	457	619	42%
1958 April	1,085	452	633	42%

¹Retail cost of average quantities of farm foods purchased per urban wage-earner and clerical-worker family in 1952, calculated from retail prices collected by Bureau of Labor Statistics.

² Payment to farmers for equivalent quantities of farm produce minus imputed value of byproducts obtained in processing.

Larger Pig Crops

Spring crop totaled 52.7 million head, an increase of 2 percent from the crop last spring. Number of sows farrowed, at 7.5 million head, was up 3 percent from the spring of 1957. Fall farrowings, indicated at 5.9 million sows based on farmers breeding intentions, would be an increase of 13 percent overlast fall's farrowings.

Smaller Meat Production

Meat production under Federal inspection (beef, veal, pork, and lamb) for the week ended May 31, at 307 million pounds, was 7 percent below the 330 million pounds a year ago. Beef, 166.8 million pounds compared with 186.8 million a year ago; veal, 12.3 million pounds, compared with 15.2 million a year ago; pork, 118.8 million pounds, compared with 117.1 million a year ago; lamb and mutton, 10.2 million pounds, compared with 10.6 million a year ago.

Increase in Poultry Production

The 94.9 million pounds of poultry certified under Federal inspection during April (ready to cook weight) compared with 87.1 million produced a year earlier. For the 4 months, Jan. through April, total was 351.4 million pounds -- an increase of 8 percent from a year ago.

More Poultry for Canning and Processing

The 19.3 million pounds of poultry, ready to cook weight, used in canning and other processed foods in April was up from a year earlier by 7 percent. For the first 4 months of this year the increase from a year earlier was 22 percent.

Rise in Farm Employment

The 8,369,000 persons working on farms in late May were 14 percent more than the 7,368,000 at work in late April, also 2 percent more than the number at work a year earlier. Biggest increase was in hired workers, up 30 percent from April and 10 percent from a year earlier.

The supply of workers available for farm labor continued to be in better balance with demand than usual for this time of year.
